## **Table of Contents**

Thierry VIALAR

## HANDBOOK OF MATHEMATICS

Over a thousand Illustrations

2016

Contents		6.2. Comments on ZFC axioms	22
Contents		7. Banach-Tarski paradox and ZF	23
		7.1. Banach-Tarski paradox	23
		7.2. Countable, measure	24
D . T D l CM . l	-	7.3. Hausdorff paradox	25
Part I. Foundations of Mathematics	1	7.4. Axioms ADC and ACC	25
		7.5. Banach-Tarski paradox and AC, ADC,	20
Chapter 1. Mathematical Logic	1	ZF, ZFC	26
1. Propositions, Connections	1	8. Hahn-Banach Theorems	26
1.1. Logical propositions, truth value	1	8.1. Prerequisites	26
1.2. Connection of propositions, logical connectives	1	8.2. Hahn-Banach theorem	32
1.3. Propositional calculus theorems	2	8.3. Hahn-Banach separation theorem	35
2. Propositional and Predicate Calculus	2	•	
2.1. Predicates, quantifiers	2	Chapter 3. Relations and Structures	35
2.2. First-order predicate calculus	3	1. Relations	35
2.3. Semantic or syntactic methods: $\omega$		1.1. Cartesian product, relations	36
assignments, or set of axioms	3	1.2. Properties of binary relations	37
2.4. Theorems of predicate calculus	3	1.3. Equivalence relation, quotient set	37
3. Extension of First-order Predicate Calculus	4	1.4. Composition of relations	38
3.1. First-order predicate calculus with		1.5. Inverse relation	38
identity	4	2. Maps, Functions	38
3.2. Higher-order predicate calculus	4	2.1. Relations, functions and maps	38
3.3. Intuitionism	4	2.2. Definition of a map	38
4. Formal System	5	2.3. Particular maps	39
4.1. Non contradiction problem, and Hilbert		2.4. Composition of maps	39
program	5	2.5. Inverse map	40
4.2. Formal system	6	2.6. Maps and operations on sets	40
4.3. Axiomatic method	6	2.7. Commutative diagram	40
5. Demonstrations and Definitions	6	2.8. <i>n</i> -variables functions	40
5.1. Demonstrations 5.2. Proof by mathematical induction (by	6	2.9. Maps and graphs	40 40
5.2. Proof by mathematical induction (by recurrence)	7	2.10. Images and antecedents 2.11. Set $\mathcal{F}(E, F)$ of maps from $E$ to $F$	41
5.3. Definition	7	3. Families	41
5.4. Methods of proof	7	3.1. Family of elements of a set	41
o.i. Wellous of proof	•	3.2. Family of sets	42
Chapter 2. Set Theory	9	3.3. Family of parts of a set	42
1. Basic Concepts	9	4. Laws of Composition	43
1.1. Subset, set of the parts of a set	10	4.1. General vocabulary, notation	43
1.2. Paradoxical set construction	10	4.2. Application to set-calculation	44
1.3. Russell paradoxical set	10	5. Power, Cardinal, Denumerability	44
2. Set Algebra	11	5.1. Number, equipotence and cardinality	44
2.1. Algebraic operations in sets	11	5.2. Power, or cardinal	45
2.2. Maps	11	5.3. Finite and infinite sets	45
2.3. Partition	12	5.4. Operations on cardinals	45
3. Lattice Theory	12	5.5. Cardinal comparison	45
3.1. Lattices, lattices of sets	12	5.6. Denumerability, non-denumerability	45
3.2. Lattices and order relations	12	6. Cardinals	47
3.3. Lattices and Boolean rings	13	6.1. Induction (noetherian induction)	47
4. Foundations of Sets	13	6.2. Equipotence	48
4.1. Set membership, elements 4.2. Definition by comprehension	13 15	6.3. Finite and infinite cardinals 7. Structures	49 50
4.2. Definition by comprehension 4.3. Constructors	15	7. Structures 7.1. Fundamental structures	50
5. Problems of Set Theory	16	7.1. Fundamental structures 7.2. Multiple structures	50
5.1. Basic definitions and context	16	7.3. System of relations	50
5.2. Basic concepts of set theory	17	7.4. Derived structures	51
5.3. Antinomies, theory of types	17	7.5. Structures, maps, morphisms	51
5.4. Axioms of set theory	18	7.6. Isomorphisms	51
5.5. Von Neumann universe	19	8. Algebraic Structures	51
5.6. Continuum hypothesis and set theory	20	8.1. Internal composition law (general)	52
5.7. Axiomatic set theory	20	8.2. Internal composition law	55
6. Zermelo-Fraenkel Set Theory (ZFC)	22	8.3. Associativity, associative law	55
6.1. Zermelo-Fraenkel axioms	22	8.4. Semigroup or Monoid	55

i

ii CONTENTS

8.5. Neutral element	56	3.1. Construction of Q	86
8.6. Inverse of an element	56	3.2. Algebraic structure of Q	86
8.7. Group	56	3.3. Q smallest field containing Z	86
8.8. Ring, integral domain (entire ring)	57	3.4. Order structure in Q	87
	57	3.5. Topological structure of $\mathbb{Q}$	
			87
8.10. External composition law	58	4. Real Numbers	87
8.11. Module, vector space	58	4.1. Default of order structure of Q	87
9. Order Structure	59	4.2. Construction of $\mathbb{R}$	88
9.1. Comparability of sets	59	4.3. Embedding of $\mathbb{Q}$ in $\mathbb{R}$	88
9.2. Order relation, ordered set	59	4.4. Algebraic structure of R	88
9.3. Contruction of order structures	59	4.5. Default of the topological structure of $\mathbb{Q}$	88
9.4. Totally ordered set	59	4.6. Construction of the completed space of Q	
9.5. Partially ordered set	60	4.7. Structure of Q	89
9.6. Order diagram	60	4.8. Isomorphism of $\overline{\mathbb{Q}}$ and $\mathbb{R}$	90
9.7. Induced order	60	4.9. Nested segments	90
9.8. Greatest element, maximal element	60		
9.9. Upper bound, least upper bound	00	4.10. Decimal expansion	90
	0.1	4.11. Representation of reals	91
(supremum)	61	4.12. Rational and irrational exponents	92
9.10. Lower bound, greatest lower bound		5. Complex Numbers	92
(infimum)	62	5.1. Construction of C	92
9.11. Well ordered set	62	5.2. Construction of $\mathbb{C}$ (other presentation)	93
9.12. Zermelo and Zorn theorems	62	\ 1	
		5.3. Cartesian representation	94
10. Ordinals	63	5.4. Complex plane (Gauss plane)	95
10.1. Isomorphisms of ordered sets	63	5.5. Conjugation	95
10.2. Order type	63	5.6. Modulus	95
10.3. Comparison of order type	63	5.7. Square roots	96
10.4. Ordinals	64		97
10.5. Finite ordinals	64	5.8. Group of complex numbers of modulus 1	
		5.9. Root of unity (de Moivre number)	98
10.6. Infinite ordinals	64	5.10. Trigonometric representation of complex	
10.7. Burali-Forti paradox	65	numbers	99
10.8. Ordinal comparison	65	5.11. Arguments of complex numbers	99
10.9. Ordinal classes	65	5.12. nth roots of complex numbers	100
10.10. Operations on ordinals	66		
10.11. Spotting of elements of a set	66	5.13. Applications to trigonometry	100
		5.14. Some geometric applications	101
10.12. Transfinite induction	66	5.15. Convergence in C (recalls)	102
11. Topological Structures	66	5.16. Complex exponential	102
11.1. Topological space	66	5.17. Exponential, logarithm in ℂ	103
11.2. Metric space	67	5.18. Geometrical representation of complex	100
11.3. Continuous maps	67		109
11.4. Particular topological structures	67	numbers	103
11.4. Farticular topological structures	07	5.19. Operations in the Gauss complex plane	103
		5.20. Algebraic closure of C	103
Chapter 4. Arithmetic	67	5.21. D'Alembert-Gauss theorem	104
1. Set of Natural Numbers N	68	5.22. Others properties of $\mathbb{C}$	105
1.1. Order relation and natural numbers	68	5.23. Topological theorem of complex numbers	
1.2. Recurrence (induction)	68	5.24. Riemann sphere, compactification	105
1.3. Addition and multiplication in N	69	6. Synthesis, Generalization	105
2. Denumerability (Counting)	70	6.1. Axiomatic construction of number system	105
2.1. Finite sets, denumerable sets	70	6.2. Univocal characterization of the natural	
2.2. Combinatorial analysis	73	numbers	105
3. Divisibility	74	6.3. Algebraic numbers and transcendental	100
			100
3.1. Euclidean division, numeration	74	numbers	106
3.2. Primes, integer factorization	75	6.4. p-adic numbers	106
3.3. GCD, LCM, Euclid algorithm	76	6.5. Quaternions	107
4. Integers ℤ	78		
4.1. Operations	78		
	79	Dont II Alashas	100
4.2. Subgroups of $\mathbb{Z}$ , divisibility in $\mathbb{Z}$		Part II. Algebra	109
5. Rational Numbers Q	81		
6. A General Exercise		Chapter 6. Algebra	109
	83		109
Charter 5 Construction of Number Coston	83	1 Introduction	
Chapter 5. Construction of Number System		1. Introduction	
1 Cominguous of Not -1 N 1	83	1.1. Sets and algebraic structures	109

6.17. Regular epimorphism	811	1.1. Introduction	829
6.18. Kernel, cokernel	811	1.2. Scope and examples of combinatorial	
6.19. Kernel pair	811	analysis	829
6.20. Natural transformation	811	1.3. Permutation without repetition	831
7. Graphs and Diagrams	811	1.4. Permutation with repetitions	831
7.1. Metagraph	811	1.5. Arrangements without repetition	831
7.2. Directed graph	811	1.6. Arrangements with repetitions	831
7.3. Isomorphic directed graphs	812	1.7. Combinations without repetition	831
7.4. Commutative diagram	812	1.8. Combination with repetitions	832
7.5. Span, cospan	813		
7.6. Diagram, cone, cocone	813	Chapter 25. Probability Calculation, Statistics	832
8. Limits and Products	813	1. Introduction	832
8.1. Direct system in a category 8.2. Direct limit, direct system	813	2. Event, Probability	836
8.3. Limit, colimit	813 814	2.1. Notion of event	836
8.4. Prelimit, direct limit	814	2.2. Intersection and union	836
8.5. Direct product, direct sum, and functors		2.3. Conditional probabilities	837
8.6. Direct product, direct sum	815	2.4. Independent events 2.5. Total probability	837
8.7. Product, coproduct	815	2.5. Total probability 2.6. Trees, successive trials	837 837
8.8. Direct sum is not necessarily coproduct	816	2.7. Probability and combinatorial analysis	838
8.9. Equalizer	816	2.8. Law of large numbers, limit theorem	838
8.10. Coequalizer	817	3. Statistical Distribution, Cumulative	000
9. Pullbacks and Pushouts	817	Distribution	839
9.1. Pullback (fiber product)	817	3.1. Relative frequency	839
9.2. Pushout (fiber coproduct)	818	3.2. Random variable	839
10. Kernels and Cokernels	818	3.3. Cumulative distribution function	839
10.1. Kernel (as morphism)	818	3.4. Expectation, variance, standard deviation	ı 840
10.2. Cokernel (as morphism)	818	3.5. Binomial distribution	840
10.3. Kernel (as pullback)	818	3.6. Poisson distribution	841
10.4. Cokernel (as pushout)	818	3.7. Normal distribution	841
10.5. Kernel pair (as pulback square)	818	4. Statistical Methods	841
11. Exact Sequences	819	4.1. Population, sample	841
11.1. Exact sequence	819	4.2. Hypothesis testing	841
11.2. Short exact sequence	819	4.3. $\chi^2$ test	842
11.3. Long exact sequence 12. Sheaves	819 819	4.4. Dependence of two criteria	842
12.1. Presheaf	819	4.5. Random numbers	843
12.1. Treshear 12.2. Sheaf	820	4.6. Random number, Markov chain, random	
12.3. Gluing axiom	820	walk	843
12.4. Sheafification (sheaving)	820	4.7. Monte-Carlo method 5. Statistical Models	844 844
12.5. Stalk	820	5.1. Notion of Model	844
12.6. Resolution of a sheaf	820	5.2. Simple regression model	846
<ol><li>Grothendieck topology, site, sieve</li></ol>	821	5.3. Multiple regression model	849
13.1. Grothendieck topology	821	5.4. Multicollinearity, and choice of optimal	010
13.2. Grothendieck pretopology	821	model	853
13.3. Covering sieve	821	5.5. Violation of assumptions	855
13.4. Sieve	822	5.6. Nonlinear models	861
13.5. Site	822	5.7. Time-lag models	863
14. Topos	822	5.8. Simultaneous equations models (SEM)	866
14.1. Topos (topoi)	822	5.9. Time series analysis	868
14.2. Power object (in topos) 14.3. Global element	824	5.10. VAR modeling	873
,	824 824	5.11. Cointegration and model with error	
15. Etale 15.1. Étalé space	824	correction	875
15.1. Étale space 15.2. Étale sheaf	825	5.12. Long memory processes	879
15.2. Etale shear 15.3. Topological étale site	825	5.13. Processes developed from the ARFIMA	001
15.4. Étale site of a scheme	825	process 5.14. The estimation of the integration	881
15.5. Étale presheaf	825	5.14. The estimation of the integration parameter d in ARFIMA(p,d,	- )
15.6. Sheaf on étale site	825	process	882
15.7. Étale topos	825	Process	002
15.8. Smooth and étale maps (of schemes)	825		
15.9. Topological grounds for sites	826	Part XI. Applied Mathematics	883
15.10. Étale topology and étale topos	827	<del></del>	
16. Yoneda Lemma, Yoneda Embedding	827	Chapter 26. Miscellaneous	883
16.1. Yoneda lemma	827	1. Fourier Series and Fourier Transform	883
16.2. Yoneda embedding	828	1.1. Bessel inequality	883
		1.2. Parseval equality	883
		1.3. Trigonometric series	883
Part X. Probability and Statistics	829	1.4. Fourier series	883
		1.5. Fourier series convergence	883
Chapter 24. Probability 1. Combinatorial Analysis	829	1.6. Fourier series integration	884
1. Combinatorial Analysis	829	1.7. Fourier transform	884
